

The GEMLink 5 is the latest environmental control software by QCOM offering a range of new features including enhanced graphical user interface, animated icons for equipment, user customizable backdrops for site, zones, ranges and panels, and new summary screens for Demand Irrigation, On-Off Devices (for Heating and Cooling), Vents, and Anticipatory Hot Water control. The new summary screens allow users to easily review, compare and copy program settings and parameters without the need to view multiple screens from individual zones and houses. The summary lists can be printed and sorted by various columns such as device name, control method and status for enhanced GEMLink operation.

NEW GEMLink 5

The new software also offers enhancements in Demand Irrigation / Fertilizer control, and user selectable time windows for minimum pipe temperature to provide improved hot water control and reduce energy consumption and cost.

The GEMLink 5 control software is backward compatible with existing QCOM hardware. For more information please contact sales@qcomcontrols.com or call (800) 833-9123.
